

How to clean a Life Tip fitting

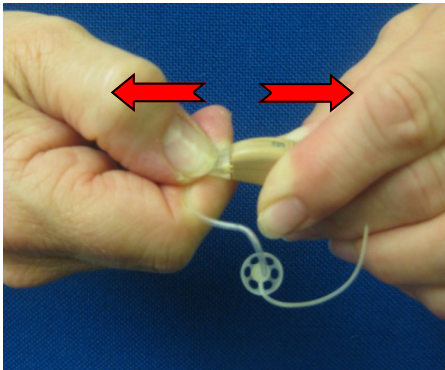

Firmly grip joint of the life tube and hearing aid...

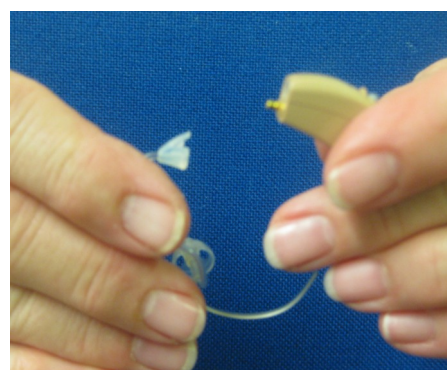

...twist 90°

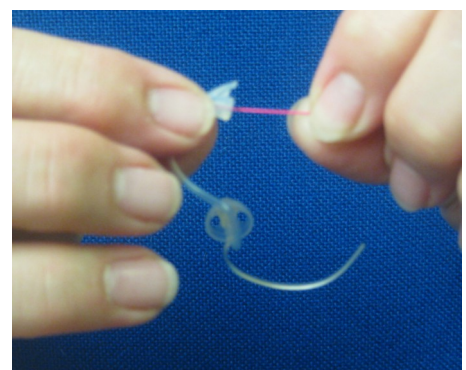

...like this.

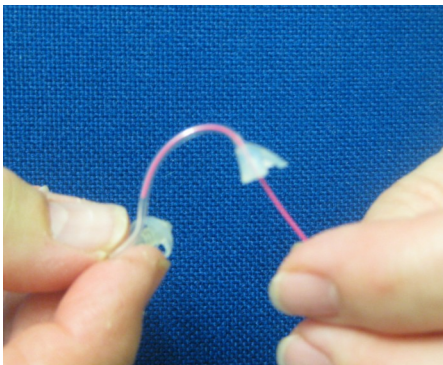

Pull apart...

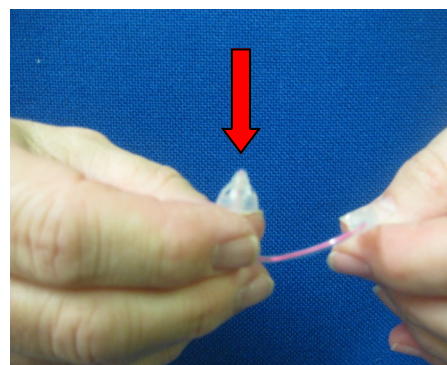

...and you will separate the life tube from the hearing aid.

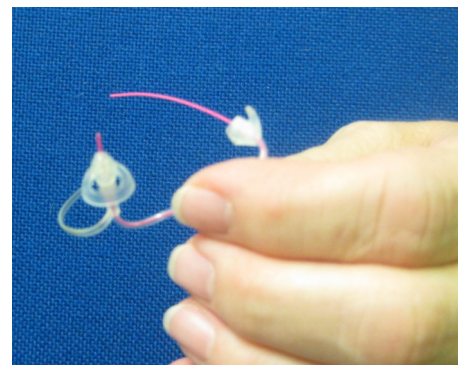

Push the cleaning wire into the top opening of the tube...

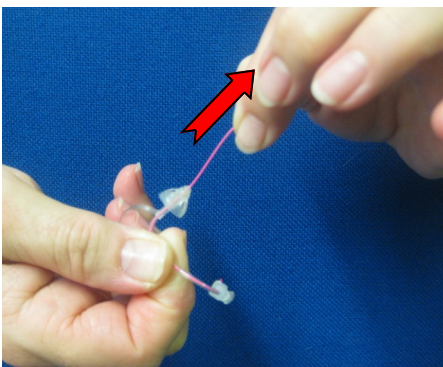

...and push through to the dome.

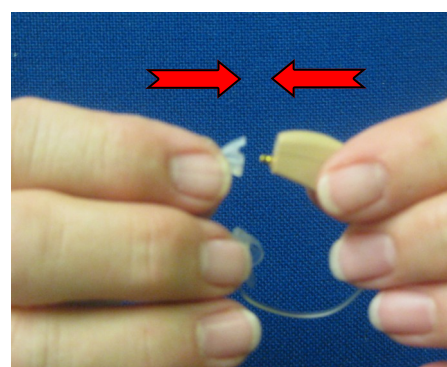

If the cleaning wire does not come straight through rub your finger over the tip...

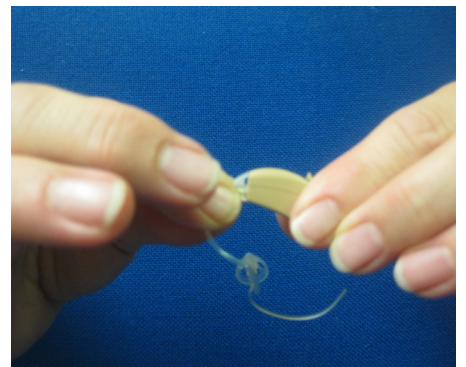

...and the wire will eventually push through.

Pull the wire through and wipe both the dome and wire.

Push the two parts back together...

...like a 'snap fastener'.
