### Background

Version three of the Saving Babies' Lives Care Bundle (SBLCBv3) published on 31 May 2023, aims to provide detailed information for providers and commissioners of maternity care on how to reduce perinatal mortality across England. The third version of the care bundle brings together six elements of care that are widely recognised as evidence-based and/or best practice:

- 1. Reducing smoking in pregnancy
- 2. Risk assessment, prevention and surveillance of pregnancies at risk of fetal growth restriction (FGR)
- 3. Raising awareness of reduced fetal movement (RFM)
- 4. Effective fetal monitoring during labour
- 5. Reducing preterm birth
- 6. Management of diabetes in pregnancy

The Care Bundle is now a universal innovation in the delivery of maternity care in England and continues to drive quality improvement to reduce perinatal mortality. It has been included for a number of years in the NHS Long Term Plan, NHS Planning Guidance, the Standard Contract and the CNST Maternity Incentive Scheme, with every maternity provider expected to have fully implemented SBLCBv2 by March 2020.

ONS and MBRRACE-UK data demonstrate the urgent need to continue reducing preventable mortality. Developed 4 years after SBLCBv2, Version 3 of the Care Bundle (SBLCBv3) has been developed through a collaboration of frontline clinical experts, service users and key stakeholder organisations. All existing elements have been updated, incorporating learning from the Clinical Regligence Scheme for Trusts: Maternity Incentive Scheme (CNST MIS) and insights from NHS England's regional maternity teams. SBLCBv3 aligns with national guidance from NICE and the RCOG Green Top Guidelines where available but it aims to reduce unwarranted variation where the evidence is insufficient for NICE and RCOG to provide guidance. SBLCBv3 also includes a new element on optimising care for women with pregnancies complicated by diabetes.

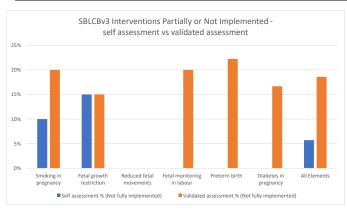

As part of the Three Year Delivery Plan for Maternity and Neonatal Services, all NHS maternity providers are responsible for fully implementing SBLCBv3 by March 2024

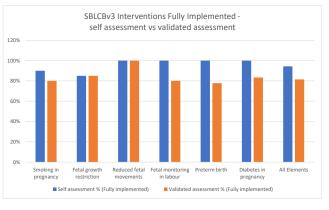

### **Implementation Grading**

Limited Assurance - Activities and control are not suitably designed, or not operating with sufficient effectiveness to provide reasonable assurance that the control environment is effectively managed.

# **Implementation Progress**

Appendix 4 – Midwifery Staffing Update

# Board of Directors in Public 06 March 2024

Title	Midwifery Staffing Update				
Area Lead	Dr Nikki Stevenson, Executive Medical Director, Deputy Chief Executive Officer (CEO)				
Author	Jo Lavery, Divisional Director of Nursing & Director of Midwifery (Women's and Children's)				
Report for	Information				

# **Executive Summary and Report Recommendations**

# **Executive Summary**

As part of the Maternity Incentive Scheme (MIS) there is a requirement to evidence a midwifery staffing review therefore the BR+ review of current midwifery staffing within the maternity service will contribute to the compliance with the requirements of the Maternity Incentive Scheme (MIS).

As part of the Maternity Incentive Scheme (MIS) published in July 2023 there is a requirement to provide the Trust Board evidence the midwifery establishment is reflective of the evidence-based process (BR+). This will be included in the Monthly Maternity Report to Board of Directors twice per annum in 2023 and is anticipated to be a requirement for MIS Year 6.

There is a requirement for providers to change the current model of care delivered within maternity services nationally, through the transformation Programme to that of a continuity of carer model. The final BR+ report identifies a need for additional midwifery staffing to enable progression of a continuity of carer model of care.

It is recommended that the Committee:

Note the report

# **Key Risks**

This report relates to these key risks:

BAF references 1,2,4 and 6

# Positives:

- The Trust has several processes that review and record patient quality indicators, incidents and patient experience metrics monthly against staffing data to identify emerging risk/s. This includes a monthly midwife to birth ratio recorded on the maternity dashboard.
- The Trust fulfils its duty to undertake 6 monthly establishment reviews including an update on midwifery staffing. The Trust has also supported a BR+ review every 5 years as a minimum and as was last performed in Spring 2021 and plans to repeat end of 2024/early 2025.

- The Division uses the BR+ acuity tool to undertake acuity and dependency reviews on Delivery Suite every 4 hours. This has been extended for use on the maternity ward and a LMNS regional platform informing staffing, acuity and dependency.
- The Division has safe staffing governance with a clear process of escalation both locally and across Cheshire and Merseyside.

# Negatives:

• The Trust having two models of care for the provision of MCoC which is inequitable, and which has additional implications and risks.

Contribution to Integrated Care System objectives (Triple Aim Duty):				
Better health and wellbeing for everyone	Yes			
Better quality of health services for all individuals  Yes				
Sustainable use of NHS resources	Yes			

Contribution to WUTH strategic objectives:	
Outstanding Care: provide the best care and support	Yes
Compassionate workforce: be a great place to work	Yes
<b>Continuous Improvement:</b> maximise our potential to improve and deliver best value	Yes
Our partners: provide seamless care working with our partners	Yes
Digital future: be a digital pioneer and centre for excellence	No
Infrastructure: improve our infrastructure and how we use it.	No

# 1 Narrative

# 1.1 Background

Birthrate Plus® (BR+) is a framework for workforce planning and strategic decision-making and has been in variable use in UK maternity units since 1988, with periodic revisions as national maternity policies and guidance are published.

It is based upon an understanding of the total midwifery time required to care for women and on a minimum standard of providing one-to-one midwifery care throughout established labour. The principles underpinning the BR+ methodology is consistent with the recommendations in the NICE safe staffing guideline for midwives in maternity settings and have been endorsed by the RCM and RCOG.

Current processes within the maternity service ensure that on a 24/7 basis staff are deployed effectively within the service, including the flexing of staff across both the acute and community care settings including the maternity continuity of carer teams.

Staff working on Delivery Suite use an acuity tool that formally assesses acuity on Delivery Suite every 4 hours as a minimum. At times of high acuity, the tool is used more frequently to assess acuity, and reports into a regional platform that was launched in September 2022. Weekly staffing reports are generated from the acuity data, and whilst this does predominantly focus on staffing within Delivery Suite the acuity tool is being expanded to include staffing across all inpatient areas. Monthly staffing reports are generated and shared by the Local Maternity and Neonatal System (LMNS) on this data regionally.

It is proposed that these reports will further inform and provide assurance regarding safe maternity staffing and will provide assurance to all Maternity Safety Champions including the Executive and Non-Executive Safety Champions who are required to have oversight, assurance, and visibility of safe staffing within the maternity service.

# 1.2 Current position

The RCM strongly recommends using Birthrate Plus® (BR+) to undertake a systematic assessment of workforce requirements, since BR+ is the only recognised national tool for calculating midwifery staffing levels.

Whilst birth outcomes are not influenced by staff numbers alone, applying a recognised and well-used tool is crucial for determining the number of midwives and support staff required to ensure each woman receives one-to-one care in labour.

Birthrate Plus® has been used in maternity units ranging from stand-alone community/midwifery led units through to regional tertiary centres, with birth rates ranging from only 10 births annually through to those that have in excess of 9000 births. In addition, it caters for the various models of care in existence, including a traditional model, community-based teams and continuity of carer/caseload teams.

Birthrate Plus® is the most widely used tool for workforce assessment classifying women and babies according to their needs and using clinical outcome data to calculate the numbers of midwives required to provide inpatient/outpatient antenatal care, intrapartum and postnatal care in either WUTH, community or neighbouring maternity unit.

The method used works out the clinical establishment based on agreed standards of care and specialist needs and then includes the midwifery management and specialist roles required to manage maternity services.

The recommendation is to provide total care to women and their babies throughout the 24 hours 7 days a week inclusive of the local % for annual, sick & study leave allowance and for travel in community.

In March 2023 Birthrate Plus were requested to review the report due to reduced birth rate and to confirm the required staff to move from 55% of women receiving continuity of carer to 100%, scanning capacity along with the activity on the delivery suite including supporting a Level 3 NNU and of area women choosing to birth at WUTH. There were no changes to the report other than adding an additional midwife for scanning capacity as demand continues to increase in line with NICE guidance. There is an internal plan to repeat Birthrate Plus 2024/25.

In 2023 WUTH maintained low vacancy rates and the majority of months was less that 2%. Current vacancy rate is 1.8% with additional funding received specifically to invest into Maternity continuity of Carer (MCoC).

# 1.3 Maternity Incentive Scheme (MIS) Safety Action 5 Required Standards:

1. The midwifery coordinator in charge of labour ward must have supernumerary status to ensure there is oversight of all birth activity within the service.

There were 14 occasions over 6 months throughout the 24 hour reporting period from July to December 2023 the midwifery coordinator reported being unable to maintain supernumerary status. This is reported as short-term until the interim plan of the caseload

being handed over with the initiation of the continuity midwife arriving or escalation processes followed to ensure further midwifery staff to rectify and ensure the midwifery co-ordinator resumes oversight of all the birth activity within the service.

2. Details of planned versus actual midwifery staffing levels to include evidence of mitigation/escalation for managing a shortfall in staff.

The maternity service has robust escalation processes to manage short falls in staffing level during periods of high acuity.

3. The midwife: birth ratio

The midwife to birth ratio is reported monthly within the maternity dashboard and has been RAG rated green during the period from July to December 2023 in line with NICE guidance and safe maternity staffing levels.

4. The percentage of specialist midwives employed and mitigation to cover inconsistences.

Birthrate plus incorporates a review of specialist midwives employed and the roles are in line with the recommended 10%. The trust has recruitment the additional Pelvic Specialist Midwife post (0.4WTE) in line with the recurrent funding received from NHSE as supported from the Three-Year delivery plan.

5. The provision of all women receiving one to one midwifery care in active labour is reported at care in labour.

Maternity services from the period July to December 2023 reports via the Birthrate plus platform 100% of women receiving one to one care in active labour.

# 1.4 Continuity of Carer:

The paper is explicit in the need to for Trusts to provide a model of care providing continuity of carer to women during the whole maternity episode. This model of care was initially detailed in Better Births in 2016 and included in the National Maternity Transformation Programme given its evidence based providing improved outcomes for mums and babies. The target date to deliver 100% continuity of carer had been removed, instead providers were requested to develop local plans that work for them ensuring staffing requirements are met along with an upskilled workforce. WUTH submitted a plan with an ambition to achieve by in 2024, however due to funding not being secured for the additional workforce a revised target date has not been set.

The benefits of a woman being cared for by the same team of midwives throughout her pregnancy including the delivery and following cannot be underestimated. Clinical outcomes are improved with this model of care, with women reporting positive birth experiences and with the woman less likely to experience postnatal illness.

A woman who receives care from a known midwife is more likely to:

- Have a vaginal birth
- Have fewer interventions during birth
- Have a more positive experience of labour and birth
- Successfully breastfeed her baby
- Cost the health system less

- Less likely to experience pre-term birth
- Less likely to lose their baby before 24 weeks gestation

Considering pre-term birth alone, it is well evidenced that the high rates of morbidity and mortality arising from preterm birth impose a considerable burden on finite health care resources. Preterm infants are at increased risk of a range of adverse neonatal outcomes including chronic lung disease, severe brain injury, retinopathy of prematurity, necrotizing enterocolitis and neonatal sepsis. In later life, preterm infants are at increased risk of motor and sensory impairment, learning difficulties and behavioural problems. The economic consequences include the costs of neonatal care as well as the costs associated with living with disabilities.

There is a substantial literature on the short and (to a lesser extent) long term clinical consequences of prematurity. The total cost of preterm birth to the public sector has been estimated to be £2.946 billion. The average cost of a pre-term birth and the provision of care is £100,000k which considers 4 weeks ITU care, 4 weeks HDU care and 2 weeks SCBU prior to discharge. This does not include the financial burden of complex investigations, tests and the long term. The incremental cost per preterm child surviving to 18 years compared with a term survivor was estimated at £22885. The corresponding estimates for a very and extremely preterm child were substantially higher at £61781 and £94740, respectively.

The Trust has six embedded teams and a further four teams is required to roll out the full model. This is dependent on the funding to increase staffing levels and has been identified from within the maternity service investment, however, a small shortfall persists.

# 1.5 NHSE Bid

The planning Guidance for 2021-22 specifically referenced additional funding for maternity services of £95million – Service Development Funding (SDF) extending to £137million in 2022-23. A detailed bid based on midwifery staffing requirements was submitted to NHSE for consideration given the requirements outlined in the Ockenden report.

WUTH was successful in its bid to secure additional funding however, the process for distributing Ockenden funding changed between 2021/22 and 2022/23. In order to ensure recurrent funding, the monies were distributed regionally on a fair shares basis, and has been allocated to the ICB rather than directly to individual Trusts resulting in a mismatch to the funding allocated last year.

Funding allocated to Cheshire & Merseyside ICB for 2022/23 is £3,731,000 which is slightly more than the total FYE allocated to all C&M Trusts last year, however, is the decision regarding the allocation of funding sits with the ICB and the LMNS in deciding which is the best and most sustainable way to split this funding between Trusts. The recurrent funding received in 2022/23 totalled £488k (in line with the revised allocation from the ICB), therefore there has been a deficit of £180k which has been met.

A review in conjunction with the Finance Business Manager has taken place and it has been confirmed the budgeted and recruited Midwives of 10.10 WTE continues to be in line with the original bid at £474K. It has been confirmed this recurrent funding will support Band 5 midwives with the usual enhancement arrangement and therefore there is no further deficit as originally anticipated. Please see table below:

Budget 2022/23			
WTE £			
10.10	474,012		

The explanation for this is the original bid was costed at mid-point Band 6 and the appointments have been at the bottom of a Band 5 scale.

# 1.6 Findings

The BR+ Report was based on a 24% uplift to reflect the additional training requirements included in Year 4 of the MIS, (which equated to an additional 40hours per annum per midwife) and was based on the following:

Based on initial 2020 activity and delivering 36% Continuity of Carer the clinical total recommended for Wirral University Teaching Hospitals NHSFT is 137.61WTE, of this 123.85WTE are Registered Midwives bands 5 -7 and 13.76WTE are MSWs providing postnatal care (on the ward/community). This equates to a total of 151.37WTE. The comparative current funded establishment is 141.23WTE which meant there was a variance of 10.14WTE as funded.

Based on current activity and delivery of 45-51% Continuity of Carer the clinical total recommended for Wirral University teaching Hospital is 141.42 WTE, of this 123.49 WTE are Registered Midwives Band 5-7 and 17.93 WTE MSW's providing post-natal care (on the ward/community). Band 8 roles have not been included as they are specialty roles and do not contribute to the delivery of MCoC.

The current establishment in accordance with Birth rate plus confirms and provides assurance of safe staffing levels to deliver MCoC up to 75%, currently approx. 60-65%% of women are in the model of care.

Table 1 summarises further the comparison between Birthrate Plus WTE with current funded WTE.

	BIRTHRATE	CURRENT	VARIANCE
	PLUS WTE	FUNDED WTE	with current
	Bands 3 to 7	Bands 3 to 7	WTE
Core Services and with	138.69	141.42	+2.73
Continuity Teams at 55%			
Core Services and with	142.81	141.42	-1.39
Continuity Teams at 75%			
Core Services and with	152.25	141.42	-10.83
Continuity Teams at			
100%			

Additional WTE required to meet 100% Continuity of Carer - Table 1

- The current establishment as funded has enable WUTH to safely deliver MCoC to 60-65% in socially deprived and vulnerable areas.
- The costing of 10.83 WTE midwives at bottom Band 6 would be £591k and would support full roll out of full MCoC ensuring an equitable service and reduce the risk of two models of midwifery care. Some funding to meet the deficit has been

identified via NHSE additional funding received into the Trust with a current live recruitment advert. The funding is not guaranteed to be recurrent and to date the funding to deliver as the default model and national ambition has not been identified.

- Options were explored to address the shortfall including the option of utilising surplus monies from CNST rebate.
- MCoC deliverables are a safety action of the Maternity Incentive Scheme (MIS) and is anticipated to be in Year 6 supporting financial income to the Trust, however the technical detail has not been published and expected Spring 2024.
- The additional posts created were all been filled with newly qualified midwives following student expansion regionally. There is progression of international recruitment of midwives regionally but to date this is not a requirement of WUTH, due to the effective recruitment and retention of midwives.
- NHSE have indicated that organisations who continue to implement the MCoC model and will be a priority for the allocation of any additional funding along with the Trust plan to have as the default model in 2024.
- Midwifery apprentice schemes are being progressed regionally along with an 18month conversion courses (Nurse (RN) to Midwife (RM).

# 1.7 Conclusion

The deficit of 10.83 wte midwives if funded was secured will continue to provide the continuity of carer model of care as part of the consideration given to overall cost savings and clinical outcomes.

The LMNS acuity staffing reports will be used to inform the 6 monthly maternity staffing paper and midwifery staffing establishment review to the Board of Directors.

The deficit to continue to deliver MCoC as the default model is supported and consideration is given to utilising part of the MIS scheme investing into maternity services to continue to meet all the safety actions.

Overall maternity staffing vacancies are nationally reporting well below the average and <2%.

# 2.1 Patients There is significant risk to patient care and safety in having two models of care as an equitable service is not being delivered. WUTH have one of the lowest levels of stillbirth rates in the region and nationally. Local research has identified significant benefits for patients including less likely to lose a baby or have a pre-term baby under 24 weeks. Patient experience within MCoC teams is positive and there have been no relating complaints to the model of care. 2.2 People It would not be safe or possible to continue the roll out of this model without securing the additional resource in line with the Birthrate plus recommendations.

	<ul> <li>A two-model approach to midwifery care impacts on wellbeing and employee experience. Internal escalation process is utilised to mitigate. However, this is not sustainable.</li> </ul>
2.3	Finance
	<ul> <li>The financial impact to deliver the model of care has been identified as £591k.</li> </ul>
2.4	Compliance
	<ul> <li>Better Births (2016) recommendations is to improve continuity of carer, teams have been set up across Wirral University Teaching Hospital (WUTH) with a continued plan to roll out continuity of carer to all women booking for maternity in line with the national drive subject to exploring and identifying the additional funding.</li> </ul>

# 2023 Maternity Survey: Early release of CQC benchmark results

This report provides benchmark results for Wirral University Teaching Hospital NHS Foundation Trust, in advance of publication of the 2023 maternity survey. It contains the scoring and 'banding' (how your trust performed compared to other trusts across England), but does not include the lowest & highest scores for England. These results can only be shared at official publication of the survey results.

By sharing results now, you will be able to see how your trust performed on individual questions in advance of the publication.

If you require any assistance, have any queries, or would like to provide feedback on the format of this report, please contact the CQC Surveys Team at: patient.survey@cqc.org.uk.

# 2023 Maternity Survey

The 2023 maternity survey involved 121 NHS trusts in England. All NHS trusts providing maternity services that had at least 300 live births were eligible to take part in the survey. Women aged 16 years or over who had a live birth between 1st and 28th February 2023 (and January if a trust did not have a minimum of 300 eligible births in February, or March if responding as part of the sample boost of ethnic minority respondents) were invited to take part in the survey. Fieldwork took place between May and August 2023. Almost 19,000 responses were received from respondents in the core sample, an adjusted response rate of  $43\%^1$ .

The maternity survey first ran in 2007 with other surveys being carried out in 2010, 2013, 2015, 2017, 2018, 2019, 2022 and 2023. The questionnaire underwent a major redevelopment ahead of the 2013 survey so results for 2023 are **only comparable** with 2013, 2015, 2017, 2018, 2019, 2021 and 2022.

CQC will use the results from the survey to build an understanding of the risk and quality of services and those who organise care across an area. Where survey findings provide evidence of a change to the level of risk or quality in a service, provider or system, CQC will use the results alongside other sources of people's experience data to inform targeted assessment activities

<sup>&</sup>lt;sup>1</sup>The 'adjusted' response rate is reported. The adjusted base is calculated by subtracting the number of questionnaires returned as undeliverable, or if someone had died, from the total number of questionnaires sent out. The adjusted response rate is then calculated by dividing the number of returned useable questionnaires by the adjusted base.

# Antenatal and postnatal care

Some respondents may have experienced antenatal and postnatal care in different trusts. This may be for many reasons such as having to travel for more specialist care or due to variation in service provision across the country.

Trusts were therefore asked to carry out an 'attribution exercise' to identify individuals in their sample that were likely to have received their antenatal and postnatal care from the trust. This was done using either electronic records or residential postcode information.

The survey results contained in this report include only those respondents who were identified as receiving care at this trust. Trusts that did not provide attribution data do not receive results on the antenatal and postnatal sections of the survey.

Data is provided voluntarily, and not all trusts provided this data. The antenatal and postnatal care questions are therefore benchmarked against those other trusts that also provided this information.

# Making fair comparisons between trusts

People's characteristics, such as age and number of previous births can influence their experience of care and the way they report it. For example, older people tend to report more positive experiences than younger people. Since trusts have differing profiles of people who use their services, this could potentially affect their results and make trust comparisons difficult. A trust's results could appear better or worse than if they had a slightly different profile of people.

To account for this, we 'standardise' respondent data to ensure that a trust does not appear better or worse than another due to its respondent profile. For maternity surveys, we standardise by age and parity (whether or not a mother has given birth previously).

# Scoring

For each question in the survey that can be scored, individual responses are converted into scores on a scale of 0 to 10. For each question, a score of 10 is assigned to the most positive response and a score of 0 to the least positive. The higher the score, the better the trust's results.

It is not appropriate to score all questions because some of them do not assess a trust's performance.

# Interpreting your data

The better and worse categories, displayed in the column with the header '2023 Band' in the tables below, are based on an analysis technique called the 'expected range'. It determines the range within which your trust's score could fall without differing significantly from the average score of all trusts taking part in the survey. If the trust's performance is outside of this range, its performance is significantly above or below what would be expected. If it is within this range, we say that its performance is 'about the same'.

Where a trust's survey results have been identified as better or worse than the majority of trusts, it is very unlikely that these results have occurred by chance. If your trust's results are 'about the same', this column will be empty.

If fewer than 30 respondents have answered a question, a score will not be displayed for this question. This is because the uncertainty around the result is too great.

# Trend data

Scores from the previous survey are displayed where available. In the column with the header 'Change from 2022' arrows indicate whether the score for the 2023 survey has increased significantly (up arrow), decreased significantly (down arrow) or has not significantly changed from 2022 (no arrow). A statistically significant difference means that the change in the result is unlikely to be due to chance.

Significance is tested using a two-sample t-test. Please note that historical comparisons are not provided for section scores as the questions contained in each section can change.

Where a result for 2022 is not shown, this is because the question was either new in 2023, or the question wording and/or response options have been changed. Comparisons are also not shown if a trust has merged with another trust(s) since the 2022 survey, or if a trust committed a sampling error in 2022.

# Further information

The full national results will be available on the CQC website later this year, together with the technical document which outlines the survey methodology and the scoring applied to each question: www.cqc.org.uk/maternitysurvey

# Results for Wirral University Teaching Hospital NHS Foundation Trust: Executive Summary

# Respondents and response rate

- 115 Wirral University Teaching Hospital NHS Foundation Trust patients responded to the survey
- The response rate for Wirral University Teaching Hospital NHS Foundation Trust was 38.59%

# **Banding**

# Better

Your trust's results were much better than most trusts for **0** questions.

Your trust's results were better than most trusts for 3 questions.

Your trust's results were somewhat better than most trusts for **0** questions.

## Worse

Your trust's results were much worse than most trusts for **0** questions.

Your trust's results were worse than most trusts for **0** questions.

Your trust's results were somewhat worse than most trusts for 2 questions.

### Same

Your trust's results were about the same as other trusts for 49 questions.

# Tables of Results

Table 1: The start of your care in pregnancy

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
B3. Were you offered a choice about where to have your baby?	99	3.7		3.5	
B4.Did you get enough information from either a midwife or doctor to help you decide where to have your baby?	105	6.7		6.3	

 ${\bf Table~2:~Antenatal~check-ups}$ 

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
B7.During your antenatal check-ups, did your midwives or doctor appear to be aware of your medical history?	106	6.5	Somewhat worse	6.0	
B8.During your antenatal check-ups, were you given enough time to ask questions or discuss your pregnancy?	111	9.0		8.5	
B9.During your antenatal check-ups, did your midwives listen to you?	111	9.1		8.7	
B10.During your antenatal check-ups, did your midwives ask you about your mental health?	111	8.7		7.0	<b>↑</b>

Table 3: During your pregnancy

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
B11.Were you given enough support for your mental health during your pregnancy?	74	8.8		7.5	<b>↑</b>
B12.During your pregnancy, if you contacted a midwifery team, were you given the help you needed?	103	8.5		8.6	
B13. Thinking about your antenatal care, were you spoken to in a way you could understand?	112	9.4		9.5	
B14. Thinking about your antenatal care, were you involved in decisions about your care?	109	9.1		8.7	
B15.During your pregnancy did midwivesprovide relevant information about feeding your baby?	110	6.6		6.0	
B16.Did you have confidence and trust in the staff caring for you during your antenatal care?	112	8.6		8.2	
B17. Thinking about your antenatal care, were you treated with respect and dignity?	112	9.3		8.9	
B18.If you raised a concern during your antenatal care, did you feel that it was taken seriously?	72	8.4			

Table 4: Your labour and birth

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
C4.Before you were induced, were you given appropriate information and advice on the benefits associated with an induced labour?	42	8.2			
C5.And before you were induced, were you given appropriate information and advice on the risks associated with an induced labour?	42	6.9		5.9	
C6. Were you involved in the decision to be induced?	42	8.1		7.7	
C7.At the start of your labour, did you feel that you were given appropriate advice and support when you contacted a midwife or the hospital?	71	8.4		8.4	
C8.Do you think your healthcare professionals did everything they could to help manage your pain during labour and birth?	84	7.5			
C9.If your partner or someone else close to you was involved in your care during labour and birth, were they able to be involved as much as they wanted?	114	9.4		8.9	

Table 5: Staff caring for you

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
C10.Did the staff treating and examining you introduce themselves?	112	9.0		9.1	
C12. Were you (and / or your partner or a companion) left alone by midwives or doctors at a time when it worried you?	115	7.6		7.4	
C13.If you raised a concern during labour and birth, did you feel that it was taken seriously?	72	8.2		7.0	
C14.During labour and birth, were you able to get a member of staff to help you when you needed it?	111	8.9		8.5	
C15. Thinking about your care during labour and birth, were you spoken to in a way you could understand?	115	9.3		9.2	
C16. Thinking about your care during labour and birth, were you involved in decisions about your care?	111	8.4		8.4	
C17. Thinking about your care during labour and birth, were you treated with respect and dignity?	115	9.0		9.0	
C18.Did you have confidence and trust in the staff caring for you during your labour and birth?	115	8.6		8.7	
C19. After your baby was born, did you have the opportunity to ask questions about your labour and the birth?	104	5.8		6.6	

Table 5: Staff caring for you (continued)

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
C20. During your labour and birth, did your midwives or doctor appear to be aware of your medical history?	104	6.9	Somewhat worse	7.4	
C21. Thinking about your care during labour and birth, were you treated with kindness and compassion?	115	8.8			

Table 6: Care in hospital after birth

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
D2.On the day you left hospital, was your discharge delayed for any reason?	114	6.7		6.6	
D3.If you needed attention while you were in hospital after the birth, were you able to get a member of staff to help you when you needed it?	102	7.0		6.8	
D4. Thinking about the care you received in hospital after the birth of your baby, were you given the information or explanations you needed?	113	7.2		7.3	
D5. Thinking about the care you received in hospital after the birth of your baby, were you treated with kindness and understanding?	114	8.1		8.3	
D6. Thinking about your stay in hospital, if your partner or someone else close to you was involved in your care, were they able to stay with you as much as you wanted?	106	9.6	Better	9.4	
D7.Do you think your healthcare professionals did everything they could to help manage your pain in hospital after the birth?	111	7.2			
D8. Thinking about your stay in hospital, how clean was the hospital room or ward you were in?	114	9.3		9.0	

Table 7: Feeding your baby

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
E2. Were your decisions about how you wanted to feed your baby respected by midwives?	97	9.1		9.3	
E3.Did you feel that midwives and other health professionals gave you active support and encouragement about feeding your baby?	94	7.8		8.1	

Table 8: Care at home after the birth

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
F1. Thinking about your postnatal care, were you involved in decisions about your care?	92	8.7		8.5	
F2.If you contacted a midwifery or health visiting team, were you given the help you needed?	79	9.3	Better	8.8	
F5. Would you have liked to have seen or spoken to a midwife	97	7.6		7.3	
F6.Did the midwife or midwifery team that you saw or spoke to appear to be aware of the medical history of you and your baby?	84	8.0		7.6	
F7.Did you feel that the midwife or midwifery team that you saw or spoke to always listened to you?	97	9.1		8.5	
F8.Did the midwife or midwifery team that you saw or spoke to take your personal circumstances into account when giving you advice?	91	8.6		8.5	
F9.Did you have confidence and trust in the midwife or midwifery team you saw or spoke to after going home?	96	8.7		8.6	
F11.Did a midwife or health visitor ask you about your mental health?	97	9.8		9.6	
F12. Were you given information about any changes you might experience to your mental health after having your baby?	95	7.9		7.1	

Table 8: Care at home after the birth (continued)

Question	Respondents	2023 Score	2023 Band	2022 Score	Change from 2022
F13. Were you told who you could contact if you needed advice about any changes you might experience to your mental health after the birth?	88	9.3	Better	7.5	<b>↑</b>
F14.Were you given information about your own physical recovery after the birth?	96	7.2		6.9	
F15.In the six weeks after the birth of your baby did you receive help and advice from a midwife or health visitor about feeding your baby?	87	7.3		7.2	
F16.If, during evenings, nights or weekends, you needed support or advice about feeding your baby, were you able to get this?	39	7.0		5.9	
F17.In the six weeks after the birth of your baby did you receive help and advice from health professionals about your baby's health and progress?	90	8.3		8.4	

Table 9: Section Scores

Background and methodology

# This section includes:

explanation of the NHS Patient Survey Programme

information on the 2023 Maternity Survey

• a description of key terms used in this report

navigating the report

# **Background and methodology**

### The NHS Patient Survey Programme

The NHS Patient Survey Programme (NPSP) collects feedback on adult inpatient care, maternity care, children and young people's inpatient and day services, urgent and emergency care, and community mental health services.

The NPSP is commissioned by the Care Quality Commission (CQC); the independent regulator of health and adult social care in England.

As part of the NPSP, the Maternity Survey was first carried out in 2007. The 2023 Maternity Survey will be the tenth carried out to date. The CQC use the results from the survey in the regulation, monitoring and inspection of NHS trusts in England.

To find out more about the survey programme and to see the results from previous surveys, please refer to the section on further information on this page.

### The 2023 Maternity Survey

The survey was administered by the Coordination Centre for Mixed Methods (CCMM) at Ipsos. A total of 63,271 people who used maternity services were invited to participate in the survey across 121 NHS trusts. Completed responses were received from 25,515 maternity service users, an adjusted response rate of 41%.

Individuals were invited to participate in the survey if they were aged 16 years or over at the time of delivery and had a live birth at an NHS Trust between 1 February and 28 February 2023. If there were fewer than 300 people within an NHS trust who gave birth in February 2023, then births from January were included.

In larger trusts, all eligible individuals from ethnic minority backgrounds, who had a live birth between 1 and 31 January and 1 and 31 March 2023 were invited to participate. A full list of eligibility criteria can be found in the survey <u>sampling instructions</u>.

Fieldwork took place between May and August 2023.

#### Trend data

In 2021, the Maternity Survey transitioned from a solely paper based methodology to both paper and online. This dual approach was continued in 2022 and 2023.

Analysis conducted prior to the 2021 survey, concluded that this change in methodology did not have a detrimental impact on trend data. Therefore, data from the 2022 survey and subsequent years are comparable

with previous years, unless a question has changed or there are other reasons for lack of comparability such as changes in organisation structure of a trust.

Where results are comparable with previous years, a section on historical trends has been included. Where there are insufficient data points for historical trends, significance testing has been carried out against 2022 data.

### Further information about the survey

- For published results for other surveys in the NPSP, and for information to help trusts implement the surveys across the NPSP, please visit the <u>NHS</u> <u>Surveys website</u>.
- To learn more about CQC's survey programme, please visit the <u>CQC website</u>.

# Background and methodology (continued)

#### **Antenatal and Postnatal data**

The Maternity Survey is split into three sections that ask questions about:

- antenatal care
- labour and birth
- postnatal care

It is possible that some maternity service users may have experienced these stages of care in different trusts. This may be for many reasons such as moving home, or having to travel for more specialist care, or due to variation in service provision across the country. For the purpose of benchmarking, it is important that we understand which trust the respondent is referring to when they are completing each section of the survey.

When answering survey questions about labour and birth we can be confident that in all cases respondents are referring to the trust from which they were sampled. It is therefore possible to compare results for labour and birth across all 121 NHS trusts that took part in the survey.

Trusts were asked to carry out an "attribution exercise", where each trust identifies the individuals in their sample that are likely to have also received their antenatal and postnatal care from the trust. This is done using either electronic records or residential postcode information. This attribution exercise was first carried out in the 2013 survey. In 2023, 121 of the 121 trusts that took part in the survey completed this exercise.

The survey results contained in this report include only those respondents who were identified as receiving care at this trust.

### Limitations of this approach

Data is provided voluntarily. In 2023, all trusts provided this data. The antenatal and postnatal care sections of this report are therefore benchmarked against all trusts that provided the required information.

Some trusts do not keep electronic records of antenatal and postnatal care. Where this is the case, location of antenatal and postnatal care is based on residential location of respondents. This is not a perfect measure of whether antenatal and postnatal care was received at the trust. For example,

respondents requiring specialist antenatal or postnatal care may have received this from another trust. This may mean that some respondents are included in the data despite having received care from another trust.

# Key terms used in this report

### The 'expected range' technique

This report shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part. It uses an analysis technique called the 'expected range' to determine if your trust is performing 'about the same', 'better' or 'worse' compared with most other trusts. This is designed to help understand the performance of individual trusts and identify areas for improvement. More information can be found in the <u>Appendix</u>.

#### **Standardisation**

Demographic characteristics, such as age can influence care experiences and how they are reported. Since trusts have differing profiles of maternity service users, this could make fair trust comparisons difficult. To account for this, we 'standardise' the results, which means we apply a weight to individual patient responses to account for differences in profiles between trusts. For each trust, results have been standardised by parity (whether or not a service user has given birth previously) and age of respondents to reflect the 'national' age distribution (based on all respondents to the survey).

This helps ensure that no trust will appear better or worse than another because of its profile of maternity service users and enables a fairer and more useful comparison of results across trusts. In most cases this standardisation will not have a large impact on trust results.

### Scoring

For selected questions in the survey, the individual (standardised) responses are converted into scores, typically 0, 5, or 10 (except for questions B3 and D8). A score of 10 represents the best possible result and a score of 0 the worst. The higher the score for each question, the better the trust is performing. Only evaluative questions in the questionnaire are scored. Some questions are descriptive, and others are 'routing questions', which are designed to filter out respondents to whom subsequent questions do not apply (for example C3). These questions are not scored. Section scoring is computed as the arithmetic mean of question scores for the section after weighting is applied.

### Trust average

The 'trust average' mentioned in this report is the arithmetic mean of all trusts' scores after weighting is applied.

### **Suppressed data**

If fewer than 30 respondents have answered a question, no score will be displayed for that question (or the corresponding section the question contributes to). This is to prevent individual responses being identifiable.

# Further information about the methods

For further information about the statistical methods used in this report, please refer to the <u>survey</u> technical document.

# Using the survey results

### Navigating this report

This report is split into **five** sections:

- **1. Background and methodology** provides information about the survey programme, how the survey is run and how to interpret the data.
- 2. Headline results includes key trust-level findings relating to the service user who took part in the survey, benchmarking, and top and bottom scores. This section provides an overview of results for your trust, identifying areas where your organisation performs better than the average and where you may wish to focus improvement activities.
- 3. Benchmarking shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part; using the 'expected range' analysis technique. This allows you to see the range of scores achieved and compare yourself with the other organisations that took part in the survey. Benchmarking can provide you with an indication of where you perform better than the average, and what you should aim for in areas where you may wish to

improve. Only trusts that provide data on antenatal and/ or postnatal care and have sufficient respondent numbers are also provided with survey results for antenatal and postnatal care within this report.

**4. Trends over time** – includes your trust's mean score for each evaluative question in the survey. This is either shown as a historical trend chart or a significance test table, depending on the availability of longitudinal data.

Where possible, significance testing compares the mean score for your trust in 2022 to your 2023 mean score. This allows you to see if your trust has made statistically significant improvements between survey years.

Historical trends are presented where data is available, and questions remain comparable for your trust. Trends are presented only where there are at least five data points available to plot on the chart. Historical trend charts show the mean score for your trust by year, so that you can see if your trust has made improvements over time. They also include the national mean score by year, to allow you to see

whether your performance is in line with the national average or not.

**Significance test tables** are presented where there are less than 5 data points available, and questions remain comparable between 2022 and 2023.

**5. Appendix** – includes additional data for your trust; further information on the survey methodology; interpretation of graphs in this report.

# Using the survey results (continued)

# How to interpret the graphs in this report

There are several types of graphs in this report which show how the score for your trust compares to the scores achieved by all trusts that took part in the survey.

The two chart types used in the section 'benchmarking' use the 'expected range' technique to show results. For information on how to interpret these graphs, please refer to the <u>Appendix</u>.

#### Other data sources

More information is available about the following topics at their respective websites, listed below:

- Full national results; A-Z list to view the results for each trust; technical document: http://www.cqc.org.uk/maternitysurvey
- National and trust-level data for all trusts who took part in the 2023 Maternity Survey: <a href="https://nhssurveys.org/surveys/survey/04-maternity/year/2023">https://nhssurveys.org/surveys/survey/04-maternity/year/2023</a>. Full details of the methodology for the survey, instructions for trusts

and contractors to carry out the survey, and the survey development report can also be found on the NHS Surveys website.

- Information on the NHS Patient Survey
   Programme, including results from other surveys:
   <u>www.cqc.org.uk/content/surveys</u>
- Information about how the CQC monitors services: <a href="https://www.cqc.org.uk/what-we-do/how-we-use-information/using-data-monitor-services">https://www.cqc.org.uk/what-we-do/how-we-use-information/using-data-monitor-services</a>

Headline results

### This section includes:

- information about your trust population
- an overview of benchmarking for your trust
- the top and bottom scores for your trust

# Who took part in the survey?

This slide is included to help you interpret responses and to provide information about the population of maternity service users who took part in the survey.

300 invited to take part

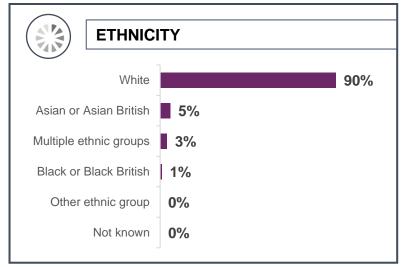

115 completed

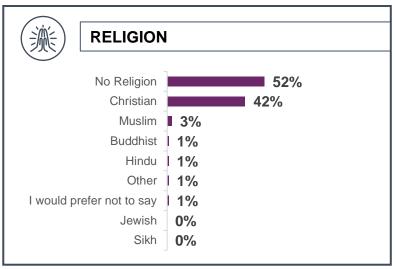

39% response rate

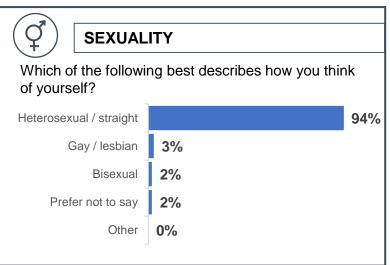

41% average trust response rate

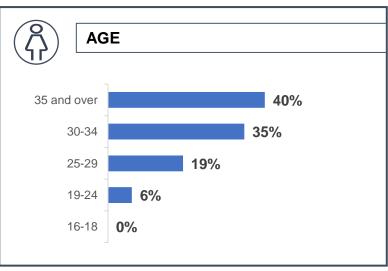

43% response rate for your trust for 2022

## **Summary of findings for your trust**

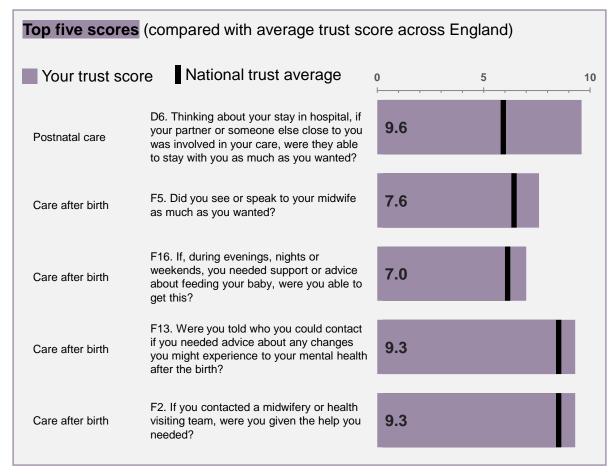

For a breakdown of the questions where your trust has performed better or worse compared with all other trusts, please refer to the appendix section "comparison" to other trusts".

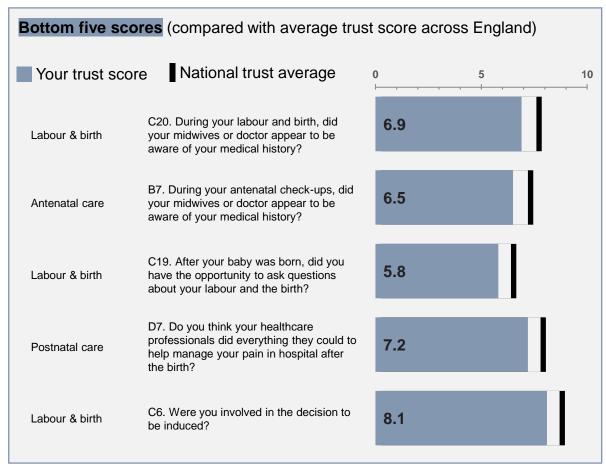

Headline results

# Best and worst performance relative to the trust average

These five questions are calculated by comparing your trust's results to the trust average (the average trust score across England).

- **Top five scores**: These are the five results for your trust that are highest compared with the trust average. If none of the results for your trust are above the trust average, then the results that are closest to the trust average have been chosen, meaning a trust's best performance may be worse than the trust average.
- Bottom five scores: These are the five results for your trust that are lowest compared with the trust average. If none of the results for your trust are below the trust average, then the results that are closest to the trust average have been chosen, meaning a trust's worst performance may be better than the trust average.

# Benchmarking

### This section includes:

- how your trust scored for each evaluative question in the survey, compared with other trusts that took part
- an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts
- for more guidance on interpreting these graphs, please refer to the <a href="mailto:appendix">appendix</a>

# Benchmarking

**Antenatal care** 

Headline results

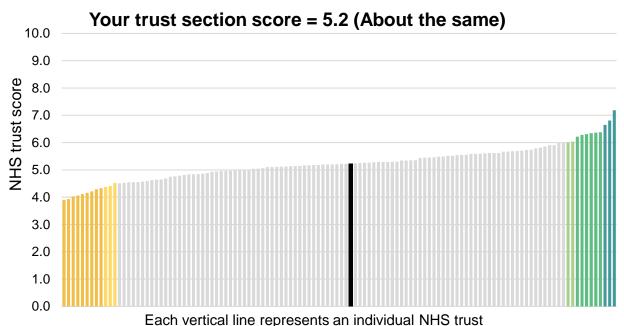

# The start of your care during pregnancy

#### **Section score**

This shows the range of section scores for all NHS trusts included in the survey that submitted attribution data for antenatal care received. Section scores are calculated as the mean of a selection of questions that fall under a particular theme. In this case, 'the start of your care during pregnancy' is calculated from questions B3 and B4. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. The 'expected range' analysis technique takes into account the number of respondents for each trust, and the scores for all trusts. As a result, a trust could be categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

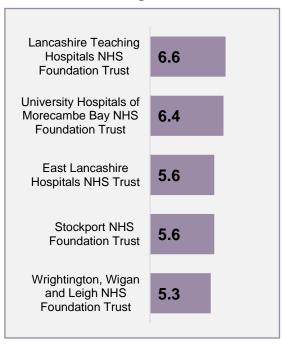

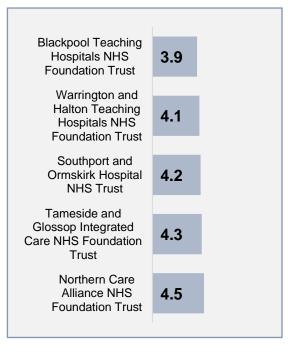

Trust score is not shown when there are fewer than 30 respondents

### Comparison with other trusts within your region

#### Trusts with the highest scores

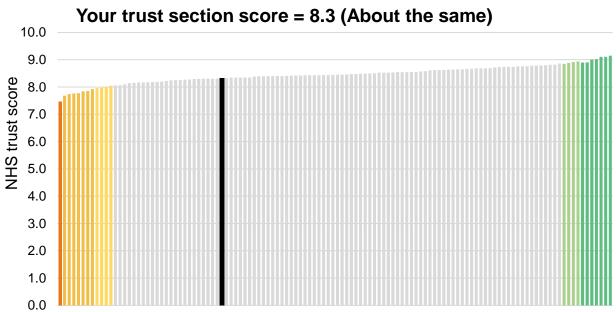

# **Antenatal check-ups**

#### **Section score**

This shows the range of section scores for all NHS trusts included in the survey that submitted attribution data for antenatal care received. Section scores are calculated as the mean of a selection of questions that fall under a particular theme. In this case, 'antenatal check-ups' is calculated from questions B7 to B10. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. The 'expected range' analysis technique takes into account the number of respondents for each trust, and the scores for all trusts. As a result, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

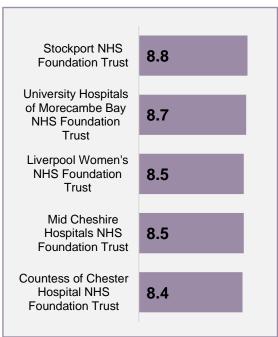

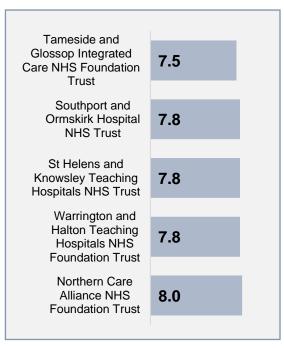

#### Each vertical line represents an individual NHS trust Trust score is not shown when there are fewer than 30 respondents

### Comparison with other trusts within your region

### This section includes:

your mean trust score for each evaluative question in the survey. This is the average
of all scores that maternity service users from your trust provided in their survey
response

 where comparable data is available over at least the past five surveys, the trend charts show the mean score for your trust by year. This allows you to see if your trust has made improvements over time

 they also include the national mean score by year, to allow you to see whether your performance is in line with the national average or not

- where consistent data are <u>not</u> available for at least the past five surveys statistical significance testing has been carried out against the 2022 survey results for each relevant question
- for more guidance on interpreting these graphs, please see the next slide

## Trends over time

The following section presents comparisons with previous survey results. Statistically significant differences in the trust mean score between 2022 and 2023 are highlighted to show where there is meaningful change between years.

Historical trend charts are presented when there are at least five data points available to plot on the chart. Five data points may not be available due to:

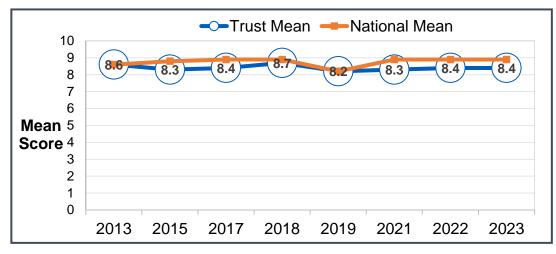

- changes to the questionnaire mean that a question is no longer comparable over time;
- organisational changes which impact comparability of results over time; or,
- historical errors with sampling or issues with fieldwork which impact comparability.

Statistically significant differences in the trust mean score between 2022 and 2023 are highlighted. These are carried out using a two sample t-test. Where a change in results is shown as 'significant', this indicates that this change is not due to random chance, but is likely due to some particular factor at your trust. Significant increases are indicated with a filled green circle, and significant decreases are in red.

Where comparable data is not available, statistical significance test tables are provided. Statistically significant changes in your trust score between 2022 and 2023 are shown in the far right column 'Change from 2022 survey', significant increases are indicated with a green arrow and significant decreases are indicated with a red arrow.

The following questions were new or changed for 2023 and therefore are not included in this section: B18, C4, C8, C21 and D7.

# **NHS Maternity Survey 2023**

## **Results for Wirral University Teaching Hospital NHS Foundation Trust**

## Where maternity service users' experience is best

- Partners or someone else involved in the service user's care being able to stay with them as much as the service user wanted during their stay in the hospital.
- Maternity service users being able to see or speak to a midwife as much as they wanted during their care after birth.
- Maternity service users being able to get support or advice about feeding their baby during evenings, nights, or weekends, if they needed this.
- Maternity service users being told who they could contact if they needed advice about any changes they might experience to their mental health after the birth.
- Maternity service users being given the help they need when contacting a midwifery or health visiting team after the birth.

## Where maternity service users' experience could improve

- Midwives or doctors appearing to be aware of the medical history of the service user during labour and birth.
- Midwives or the doctor appearing to be aware of service users' medical history during antenatal check-ups.
- Maternity service users having the opportunity to ask questions about their labour and the birth after the baby was born.
- Maternity service users feeling that healthcare professionals did everything they could to manage their pain in hospital after the birth.
- Maternity service users being involved in the decision to be induced.

These questions are calculated by comparing your trust's results to the average of all trusts who took part in the survey. "Where maternity service users experience is best": These are the five results for your trust that are highest compared with the average of all trusts who took part in the survey. "Where maternity service users experience could improve": These are the five results for your trust that are lowest compared with the average of all trusts who took part in the survey.

This survey looked at the experiences of individuals in maternity care who gave birth between January and March 2023 at Wirral University Teaching Hospital NHS Foundation Trust. Between May and August 2023, a questionnaire was sent to 300 individuals. Responses were received from 115 individuals at this trust. If you have any questions about the survey and our results, please contact [NHS TRUST TO INSERT CONTACT DETAILS].

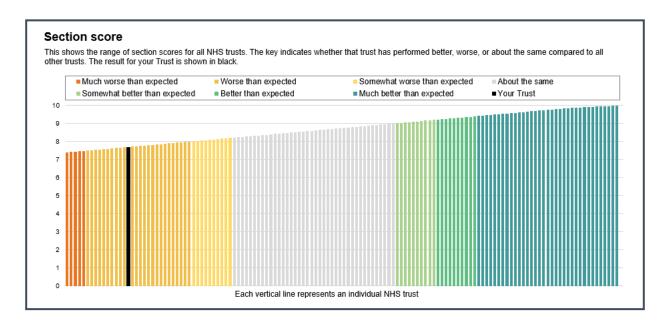

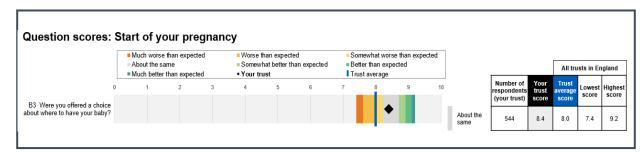

# How to interpret benchmarking in this report

The charts in the 'benchmarking' section show how the score for your trust compares to the range of scores achieved by all trusts taking part in the survey. The black line shows the score for your trust. The graphs are divided into seven sections, comparing the score for your trust to most other trusts in the survey:

- If your trust's score lies in the **dark green section** of the graph, its result is 'Much better than expected'.
- If your trust's score lies in the **mid-green section** of the graph, its result is 'Better than expected'.
- If your trust's score lies in the **light green section** of the graph, its result is 'Somewhat better than expected'.
- If your trust's score lies in the grey section of the graph, its result is 'About the same'
- If your trust's score lies in the yellow section of the graph, its result is 'Somewhat worse than expected'.
- If your trust's score lies in the **light orange** section of the graph, its result is 'Worse than expected'.
- If your trust's score lies in the **dark orange** section of the graph, its result is 'Much worse than expected'.

These groupings are based on a rigorous statistical analysis of the data termed the 'expected range' technique.

Headline results

The 'much better than expected,' 'better than expected', 'somewhat better than expected', 'about the same', 'somewhat worse than expected', 'worse than expected' and 'much worse than expected' categories are based on an analysis technique called the 'expected range'. Expected range determines the range within which a trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust, to indicate whether the trust has performed significantly above or below what would be expected.

If it is within this expected range, we say that the trust's performance is 'about the same' as other trusts. Where a trust is identified as performing 'better' or 'worse' than the majority of other trusts, the result is unlikely to have occurred by chance.

The question score charts show the trust scores compared to the minimum and maximum scores achieved by any trust. In some cases this minimum or maximum limit will mean that one or more of the bands are not visible – because the range of other bands is broad enough to include the highest or lowest score achieved by a trust this year. This could be because there were few respondents, meaning the confidence intervals around your data are slightly larger, or because there was limited variation between trusts for this question this year.

In some cases, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust. This occurs as the bandings are calculated through standard error rather than standard deviation. Standard error takes into account the number of responses achieved by a trust, and therefore the banding may differ for a trust with a low numbers of responses.

Please note, the benchmark bandings were updated for the 2021 survey to provide a greater level of granularity in the expected range score. The 2023 survey uses the same approach.

Additional information on the 'expected range' analysis technique can be found in the survey technical report on the NHS Surveys website.

# An example of scoring

Each evaluative question is scored on a scale from 0 to 10. The scores represent the extent to which the experience of people who use maternity services could be improved. A score of 0 is assigned to all responses that reflect considerable scope for improvement, whereas a score of 10 refers to the most positive patient experience possible. Where a number of options lay between the negative and positive responses, they are placed at equal intervals along the scale. Where options were provided that did not have any bearing on the trust's performance in terms of patient experience, the responses are classified as "not applicable" and a score is not given. Similarly, where respondents stated they could not remember or did not know the answer to a question, a score is not given.

## Calculating an individual respondent's score

The following provides an example for the scoring system applied for each respondent. For question B7 "During your antenatal check-ups, did your midwives or doctor appear to be aware of your medical history?":

- The answer code "Yes, always" would be given a score of 10, as this refers to the most positive patient experience possible.
- The answer code "Yes, Sometimes" would be given a score of 5, as it is placed at an equal interval along the scale.
- The answer code "No" would be given a score of 0, as this response reflects considerable scope for improvement.
- The answer codes "Don't know / can't remember" would not be scored, as they do not have a clear bearing on the trust's performance in terms of the people who use maternity services experiences.

#### Calculating the trust score for each question

The weighting mean score for each trust, for each question, is calculated by dividing the sum of the weighting scores for a question by the weighted sum of all eligible respondents to the question for each trust. Weighting is explained further in the quality and methodology report.

#### Calculating the section score

An arithmetic mean of each trust's question scores is taken to provide a score for each section.

# PERINATAL CULTURE AND LEADERSHIP DEVELOPMENT PROGRAMME TIMELINE

A 6 month programme comprising:

- Welcome event
- 3 modules (face-to-face)
- 4 action learning sets (3 virtual, 1 f-2-f)
- Leadership perspectives (self directed strengths based facilitated 360)

# 3 CULTURAL CONVERSATIONS

A 4 - 5 month process comprising:

- Quad development sessions
- Team conversations
- Ouad check-ins
- Improvement planning

#### YOUR SELF-ORGANISATION

- Continue meetings and conversations as Quad and with Board Safety Champions
- Peer support from action learning set
- Continue conversations about culture in your teams
- Continue working on improvement priorities
- Provision of practical support / tools for teams and leaders to use when planning improvement

-	Appendix 8 Perinatal Clinical Surveillance Quality Assurance Report Jan 2024	Outline.	• 11
Theme	Area requiring further enquiry or shared intelligence	Outlier	Evidence
2	Outlier for rates of stillbirth as a proportion of births	Yes	No escalation from SCN / LMNS on outlier report; internal thematic review being undertaken; NW region outlier report no longer published and NW Regional dashboard now available however discussed regionally as Data to May 2023 and decision awaited on key reporting metrics and also data collection methodology; all
=		_	users requested access accorringly; awaiting feedbeck when dashboard will be able to be utilised
. <u>.</u>	Outlier for rates of neonatal deaths as a proportion of birth	na	No escalation from SCN / LMNS on outlier report; internal thematic review being undertaken; NW region outlier report no longer published and NW Regional dashboard now available however discussed regionally as Data to May 2023 and decision awaited on key reporting metrics and also data collection methodology; all
5			users requested access accoringly; awaiting feedbeck when dashboard will be able to be utilised; thematic review requested as 3 term still births in Q3/Q4 of 2023
	Rates of HIE where improvements in care may have made a difference to the outcome	na	Very low rates of HIE, sitting way below the lower control limit for the region. No current cases
	Number of SI's		No serious incidents reported in January 2024
	Progress on SBL care bundle V3		SBLv3 launched and continued to be a key safety action of MIS Year 5 which was signed off as complaint meeting 81% (>70% was the requirement); Audits and evidence to be submitted by 16/2/24 for LMNS review and ambition to achieve 100% compliance by 31/3/24
	Outlier for rates of term admissions to the NNU	na	The rate of avoidable term admissions; regular multi-disciplinary reviews of care take place; NW region outlier report no longer published and awaiting national guidance on monitoring processes
# #	MNVP or Service User concerns/complaints not resolved at trust level		Not an outlier regarding the number of complaints; to date all complaints have been addressed for maternity in the target timeframesand there is nil to escalate
Ë	Trainee survey		No update this month
ĕ	Staff survey		Trust Staff Survey completed and divisional response has included staff engagement and continuation with the Pulse surveys; Score survey completed for MatNeo and cultural conversations commencing over x 4 sessions; Requirement to report to BOD Feb 2024
9	CQC National survey		Published Feb 2024 and included within BoD report
-8	Feedback via Deanery, GMC, NMC		Nil to esclate
Š	Poor staffing levels	no	All vacacnies have been recruited into for Band 5 and Band 6 midwives; further retirements anticipated later and in the year. Current vacancy rate 1.8%
	Delivery Suite Coordinator not super nummary	no	Super nummary status is maintained for all shifts
를 를 함	New leadership within or across maternity and/or neonatal services		Nil of note; full establishment; governance structure review and revised structure implemented to meet requirements and maternity self assessment tool and continue to meet Ockenden Part 1
ers a	Concerns around the relationships between the Triumvirate and across perinatal services		Good working relationship between the teams / Directorates
tio ad	False declaration of CNST MIS	no	MIS Year 5 submission and declaration submitted by 12 noon on 1st February 2024; Awaiting Year 6 publication
2 5	Concerns raised about other services in the Trust e.g. A&E	no	Nil of note
_	In multi-site units - concerns raised about a specific unit i.e. Highfield/CoC teams	no	Nil to report this month; funding options explored; 6 teams in total and two approach model in place; comparison data / research underway
물 물	Lack of engagement in MNSI or ENS investigation	no	Good engagement processes in place with north west team leader. Monthly reports received of ongoing cases and recent discussions regarding the process of arbitration with regional lead. Quarterly regional meetings arranged with excellent MDT attendance. Quarterly meeting held in Feb 2023; site visit May 2023; nil to
를 수 를			escalate
a e	Lack of transparency		Being open conversations are regularly had and 100% compliance with duty of candour evident
is in	Learning from SI's, local investigations and reviews not implemented or audited for efficacy and impact	no	Robust processes following lessons learned from all PSSI's, local reviews, rapid evaluations of care, complaints and compliments. Engagement with staff to assess and improve how learning is shared. Patient experience strategy in progress.
eau	Learning from Trust level MBRRACE reports not actioned	no	All reports receive a gap analysis to benchmark against the recommendations
_	Recommendations from national reports not implemented	no	All reports receive a gap analysis to benchmark against the recommendations. No exceptions to report. Three year single delivery plan for maternity and neonatal services published 31th March 2023 - gap analysis in progress and will monitored via WUTH CG structure and BoD
걸	Low patient safety or serious incident reporting rates	no	Consistent rates of reporting across the speciality groups. Regular training takes places on the importance of incident reporting, underpinning the Trust stance of safe reporting and non-punitive culture
or it	Delays in reporting a SI where criteria have been met	no	Robust SI process and SI framework followed with timely reporting of all cases that meet the SI framework; PSIRF with effect from 1/9/2023
프	Never Events which are not reported	no	No maternity or neonatal never events in January 2024
2	Recurring Never Events indicating that learning is not taking place	no	N/a
	Poor notification, reporting and follow up to MBRRACE-UK, NHSR ENS and HSIB	no	Excellent reporting within the required timescales
nanc	Unclear governance processes		Clear governance processes in place that follow the PSIRF framework - Within division there is maternity and neonatal review of governance processes: 3 separate meetings. Staff are informed of top risks and incident themes. Governance notice boards updated and newsletters disseminated. Additional quality assurance
			framework agreed with effect from June 2023 to give the BoD additional assurances in monitoring of MIS. Three year delivery plan etc. Governance structure strengthened
i Š	Business continuity plans not in place	nn	Business continuity plans in place
g a	Ability to respond to unforeseen events e.g. pandemic, local emergency		Nil to report this month
	I and a superior of the superi		Towns offers are remain.
S 0 3	DHSC or NHS England Improvement request for a Review of Services or Inquiry	no	NII to report this month
SC	An overall CQC rating of Requires Improvement with an Inadequate rating for either Safe and Well-Led or a third domain		The Control of the Co
D H	An overall CQC rating of Inadequate	no	
E 9 3	Been issued with a COC warning notice	no	
E S	COC rating dropped from a previously Outstanding or Good rating to Requires improvement in the safety or Well-Led domains	no	
, z	Been identified to the COC with concerns by HSIB	no	

# Overview Report SCORE Survey Culture and Engagement Survey Results

#### Wirral University Teaching Hospital NHS FT

Survey Period: Oct 2023

Total work settings surveyed: 13 Current period response rates:

- Wirral University Teaching Hospital NHS FT: 26%

Survey results are increasingly accurate as response rates (RR) rise.

We do not report work setting data with response rates <40% or with fewer than 5 responses.

At 40-60% RR, the data requires other corroboration (i.e. interviews of staff).

At >60% RR, the data depicts an accurate image of a work setting.

### The Value of an Integrated Survey

- The SCORE survey measures important dimensions of organizational culture. The core instrument integrates safety culture, local leadership, learning systems, resilience / burnout and work-life balance. The full instrument integrates employee engagement as well.
- The insights are critical for organizational improvement and the ability to drive habitual excellence.
- Specific actions can be taken to leverage organizational strengths and address areas of fundamental opportunity.

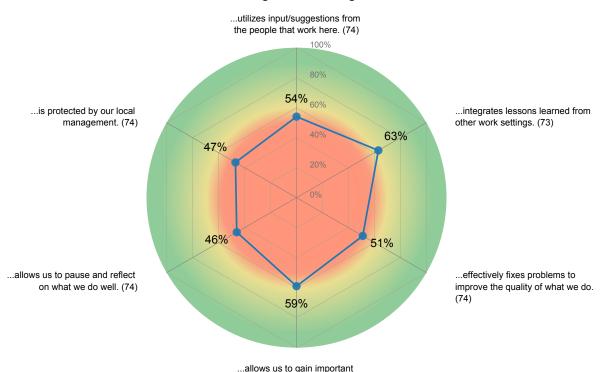

### Why are Culture and Engagement Important?

- They reflect the behaviors and beliefs within an organization.
- There are behaviors that create value individually, for the patient and the organization.
- There are behaviors that create unacceptable risk.
- These attitudes and behaviors are reflected in how people interact with each other both internally and externally with patients and their families.
- Culture and Engagement are the social glue.

### Domain Scores - A Picture of the Organization

- Please remember domains are composed of groups of questions, and respondents very often answer individual questions differently.
- This phenomenon, known as cultural instability, results in domain scores being lower than individual question scores.
- That is why it is really important to examine the SCORE data at an individual question level.
