Celebrating Our Role in Developing the Next Generation of Doctors

The University of Liverpool School of Medicine has shared a fantastic feature recognising WUTH and the crucial part our staff play in supporting the next generation of doctors.

As a long-standing teaching partner, we recently welcomed Year Two medical students for their first clinical placement and continues to support learners right through to Year Five. Many later return to WUTH as Foundation doctors.

In their article, the University shines a spotlight on Lisa Hill, Deputy Medical Education Manager, who oversees more than 850 medical student placements every year across Medicine, Surgery, Obstetrics and Gynaecology, and Paediatrics. Lisa and the Undergraduate Administration Team ensure every student receives a well-structured timetable, a supportive environment and opportunities to experience real clinical practice.

The feature highlights:

- How WUTH provides a positive and inclusive learning environment
- The dedication of our clinical staff, with more than 130 receiving letters of appreciation last year
- The team's commitment to learner wellbeing, including Mental Health First Aid training
- Memorable moments including our Covid era makeshift graduation and our innovative Intromed programme for local school pupils

The University praises not just the Medical Education Team, but the many colleagues across WUTH who welcome students, involve them in learning, and help shape their journey into medical practice.

We are proud of the contribution our staff make to developing future clinicians and grateful to everyone who supports teaching and learning across our hospitals.
